

AI Hiring Lifecycle Simulator – Product Blueprint

Problem Statement

Candidates fail hiring pipelines due to lack of structured preparation across resume filtering, aptitude elimination, group dynamics, technical evaluation, and behavioral pressure. There is no unified platform that simulates the complete interview lifecycle and tracks measurable improvement.

Solution Overview

Build an AI-powered Hiring Lifecycle Simulator that mirrors real-world recruitment flow while generating performance analytics.

Complete Product Flow

- Interactive Landing Page (Role Selection + Education Details + Resume Upload)
- Round 1: Resume Screening (ATS Score + Skill Gaps + Drawbacks)
- Round 2: Aptitude / Online Assessment (Accuracy + Speed + Cognitive Profile)
- Round 3: Group Discussion (Friends or AI Bots, Dominance + Clarity Score)
- Round 4: Integrated Interview Round (Technical + Managerial + HR Combined)
- Round 5: Final Analysis Dashboard (Graphs, Feedback, Growth Plan)

Technology Architecture

- Frontend: React Native + NativeWind
- Backend: Node.js (API + Session Management)
- Database: MongoDB (User Metrics + History)
- AI Layer: OpenAI API (Conversation + Evaluation)
- ATS Engine: Custom ML Microservice

Scoring & Analytics Engine

- ATS Resume Strength Score
- Aptitude Cognitive Index
- GD Communication & Dominance Score
- Technical Depth Score
- Behavioral Stability Score
- Negotiation Confidence Score
- Overall Hiring Probability Simulation

Step-by-Step Build Plan (3-Month MVP)

- Month 1: Resume ATS + Integrated Interview Round
- Month 2: Scoring Engine + Performance Dashboard
- Month 3: Aptitude Module + Basic GD with AI Bots
- Launch with one target track (e.g., Software Engineering) before expanding

Core Differentiator

Not a bundle of tools, but a continuous hiring simulation with measurable growth tracking and adaptive interview difficulty.

Strategic Focus

Start narrow (one career track), build deep analytics, validate with users, then expand to additional domains like Hardware or Government exams.
